Anatomy is the science which treats of the structure, form, and position of the various parts of the body. The human body is obviously separable into the head, trunk, and limbs; and if divided down the center from before backward by a vertical line, the two halves would almost exactly resemble one another. If the limb of any animal be examined, there will easily be recognized an external covering of soft material, and of varying thickness, termed the soft parts, and an internal hard part consisting of bone. If the limb be dissected, and the skin with the fur be cut through and turned aside, the pale red flesh is seen underneath, arranged in bundles or columns. On tracing these columns of flesh, they will mostly be found to terminate at one or both ends in a firm white cord attached to some part of the bone. These white cords are called tendons, and the columns of flesh, muscles. Between the muscles are soft white threads, the nerves, running down the limb and giving off fine branches. Close by the nerves are other threads, which are really hollow tubes or Mood-vessels. These appear of dark-reddish color when they contain blood, but are pale and flat when empty. All these together make up the soft parts, and they...
