RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 64 pages. Dimensions: 9.7in. x 7.4in. x 0.1in.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1888 Excerpt: . . . foot of the perpendicular drawn thereon from T, and each is equal in length to the perimeter of aPy. Or rather, first investigated by M. Lemoine, and subsequently reinvestigated independently by Mr. MCay, (see Chap. IX.). The Cosine circle is known in France as the second Lemoine circle of ABC. See note on p. 114. Whence it immediately follows that the six points D, V, E, E F, F all lie on a circle whose centre is T the incentre of a3y, that is, the centroid of the perimeter of the triangle FQR. 63. This circle is called, from the name of its discoverer the H. M. Taylor circle of ABC. It may also be defined as the circle passing through the feet of the perpendiculars from the vertices of PQR on the sides of ABC. For SF PR PP, shewing that PF is perpendicular to AB. In the same way it follows that the angles PEC, QDC, QFA, RDC, REJ are all right angles. Here again, Mr. Taylor reinvestigated independently a circle whose properties had been for some years previously known on the Continent. See Chap. IX. Hence it follows by Art. 55 that the triangle FDE, and consequently the triangle EFD, are each similar to ABC, and that the circle through JD, B, E, E, F, F is a Tucker circle. Ex. 1. Prove, independently of Chap. V. , that DE, EF, FBf are equal, and respectively parallel to AB, BC, CA. Ex....
